

The solution for water shortages

ANNUAL OPERATING EXPENSES

Greywater Recycling

The annual maintenance costs associated with the BRAC Greywater Recycling Systems are only \$20 to \$25 CDN., excluding the cost of the reusable filters.

The costs can be further broken down as follows:

- \$11 - \$13 = Hydro expenses to operate the BRAC pump and electrical components.
- \$6 - \$7 = Chlorine pucks needed for the disinfection process.
- \$3 - \$5 = For vinegar or bleach to rinse the holding tank annually if there is any residue.
- \$25 = Brac Systems brand 100-micron Polypropylene reusable filter cartridge.

The labour costs to rough-in the plumbing and install the BRAC System in an averaged sized new house (around 2500 square feet) should be between \$1000 and 1500 CDN. Excluding the BRAC tank. These prices are dependant on the local market's construction prices and will vary from region to region.

The BRAC System comes equipped with a 100-micron (nominal) Polypropylene reusable filter that should last at least 2 years when handled properly. A spare filter is also included in the purchase of every system and replacement filters are available from Brac Systems Inc at a cost of \$24.99 CDN each. The filters will require cleaning every 4-6 weeks depending on usage. This is a five minute operation.

Also included is a 200' roll of purple marking tape that is required by the plumbing code to be applied to the greywater piping from the BRAC System. This operation will be performed by the plumbing contractor.

Brac Systems Inc. offers a 2 year warranty on all BRAC Greywater Recycling Systems.
