IZI-flow® Foot Pedal Faucet Control

Here are the basic steps to install IZIFLOW:

1. Turn off the water supply
2. Mount the valve to the wall between the faucet and the water outlet with 2 screws
3. Connect the faucet to the top of the valve using standard hoses as you would with any faucet
4. Connect the water supply to the bottom of the valve using standard hoses as you would with a regular faucet
5. Run the cable from the valve and attach to the foot pedal
6. Turn on the water supply and you're good to go!

*If you are using the integrated foot pedal, you'll simply have to drill a hole in the bottom of the cabinet to allow the foot pedal to poke through and screw the pedal to the floor for stability.
