

Multi-Family Housing

Using Eco-Panels that connect quickly and securely with embedded cam-locks, foam sealant and the simple turn of a hex wrench, these townhome walls were assembled at the rate of about one floor every two hours by two people.

This 14 unit townhome development used Huber's ZIP System (housewrap impregnated OSB) as the exterior siding on the 8' upper floor panels and LP SmartSide as the finished exterior siding on the 10' panels of the lower floor. 2nd floor trusses were hung inside the building envelope using a top-chord bearing truss. Batten strips were later applied to bottom floor for appearance.
