Brac Gray Water Systems Sump Pump System

The Brac Systems Sump and Pump Kit

Because the BRAC system relies on gravity for greywater to drain from your bath or shower into the inlet of the Brac System, owners with single level homes on a slab foundation (or other single-level structures) require this kit to pump the greywater up to the inlet of the Brac System. The sump is installed in the foundation or floor, below the level of the lowest drain you intend to capture greywater from. As greywater collects in the sump, a float-activated sump pump elevates the greywater to the inlet of the Brac System. The sump and pump kit should be located near your Brac System. Kit includes tank, lid, sump pump, pump manual, and two-year warranty.
